COUCHSURFİNG WEB SİTE

Introduction

In this project we will be develope hospitality exchange and social networking website.We planned to develop the website project by using agile methodology and PHP language.

Epic

As a guest, we want to find a suitable and safety accommodation for my journey.
As a host,we want to find a reliable guest who is follow my home rules.

Theme and User Stories

1. Sing up and Login

   - As a registered user, I want to be able to login to the website and the system by using my user name and a password after the e-mail activation .

2. Fill your profile with your personal information

   - Members are asked to provide information and photos of themselves and of the accommodation they offer, if any. More information provided by a member, and other members, may affect the chances that someone will find the member trustworthy enough to be their host or guest. Members looking for accommodation can search for hosts using several parameters such as age, location, and gender.

3. Join the Group

   - The members want to join groups for their interest.The members discuss new idea and problem in the groups.

4. Attend local meetings

   - Attend the local meeting such as birtday party,bowling,paintball..

5. Search Couch

   - Search suitable couch for your trip

6. Send request
   - Send request for accommodation to hosts

PSI (Potentially Shippable Increment)

Planned how to connect hosts and guest.

MVP (Minimum Viable Product)

Registration is free of charge.Members are asked to provide information and photos of themselves and of the accommodation they offer, if any. More information provided by a member, and other members, may affect the chances that someone will find the member trustworthy enough to be their host or guest. Members looking for accommodation can search for hosts using several parameters such as age, location, and gender. In addition these we desired to provide a connection between hosts and guests.

Done

- Planning is done

Sprint Plan

1.
    - Documentation is done
2.
    - We will be initialize database communication.
    - We will be initialize pages of the web site.
    - We will be start coding.
